Connor and Salon, Unit IX

Problem 1 - Lossy media parameters
Find the values $\alpha$, $\beta$, $\lambda$, and $\eta$ for an electromagnetic wave traveling through seawater ($\varepsilon_r = 72$, $\sigma = 4 \text{ S/m}$) at 10 MHz? Repeat the calculation for the a 100 GHz frequency.

Problem 2 - Energy & Power - lossy media
A 10 MHz wave is polarized in the x direction and propagates in the +z direction in seawater. At z=0, it has a power density of 10 W/m² (Use the results of Problem 1).

a. Write the electric and magnetic fields in phasor form.

b. Write the electric field in time domain form.

c. At what value of z will the power density of the wave be 1% of its initial power?
