Homework #2
Circuit Transfer Functions
Due: Tuesday, 23 February (Can be turned in the studio
during open shop times or at Prof. Connor's Office, JEC 6002)

There is an example in Gingrich that begins on p. 56 where he determines the transfer function of an RLC circuit. Repeat this analysis for the circuit of problem 1 on page 61. That is, do just the analysis of the example, not all that is asked for in the problem statement.
