Project 4 Final Design Project Stipulations

Due to time constraints this semester, the final design project for EI has been made optional. It has also been made less intense than the other three projects in order to make it easier to complete on-time. For project 4, you are required to do one of the following:

- 1) A counting circuit
- 2) A light display
- 3) "The Clapper"
- 4) Build a kit you ordered for project 4

The first three options can all be built using parts in your EI kit. For details, see the project 4 write-up from Fall 2003.

To fulfill the requirements for the project 4 write-up, you must complete the following:

- 1) Build your circuit and get it to work.
- 2) Have a staff member sign the following page after you have demonstrated your project is functional.
- 3) Hand in a complete circuit diagram of your project.
- 4) Hand in a 1-2 page description of how your project works. Include both electrical and mechanical components.
