

Practical Quizzes
General Rules, Guidelines and Advice

The purpose of the practical quizzes is to test the practical knowledge of every student in the class. All the tasks that make up these quizzes are found in at least one of the experiments or projects that are to be completed by each group.

Preparing for the Quizzes: Read the quiz statements carefully. All quizzes will be posted in the syllabus web page well before they are due. Thus, there is no good reason to attempt any quiz blindly.

Key Tasks: Listed at the top of each practical quiz are the specific tasks the quiz is designed to address. Be sure that you understand the nature of these tasks, since that will help guide you as you decide how to approach the quiz.

Grading: The quizzes must be completed correctly to obtain credit. Usually, each student has three tries to complete each quiz. After that, the amount of credit given for completing the quiz is up to the TA or instructor in attendance.

Completion of the Quizzes: When you think you have successfully completed the tasks of the quiz, show your results to the TA or instructor in attendance. To properly assess your work, they must look over the hardware and/or software setup you have used. Thus, DO NOT PUT ANY EQUIPMENT AWAY OR CLOSE ANY PROGRAM UNTIL YOU HAVE BEEN GIVEN CREDIT FOR THE QUIZ.

Table with 3 columns: Quiz Number, Date Completed, TA/Instructor. It contains six rows of horizontal lines for data entry.
